

***This production list is presented to you by the editorial team of  
"Soviet Transports" - current to the beginning of January 2025.  
Additions and corrections are welcome at [sovtransresearch@yahoo.com](mailto:sovtransresearch@yahoo.com)***

The logic in the sequence of the types is the following:

- First come the transport and passenger aircraft, in order of their Y numbers. They are followed by those passenger aircraft which do not have Y numbers.
- Then come the specialist aircraft which are based on transports, like the KJ600.
- They are followed by the flying boats and amphibians.
- Next come the bombers, in order of their H numbers.
- They are followed by the trainers.
- Last but not least come the helicopters, in order of their Z numbers (the civil versions with AC designations are given together with their Z military counterparts).
- Finally, an unidentified North Korean twin-engine aircraft is covered.

## Nanchang Y5

In October 1956, the Chinese aviation industry took the decision to produce the An-2 under licence. The Nanchang Aircraft Factory was chosen to undertake this task. Soviet drawings were sent to China in October 1956 and arrived at the Nanchang factory in January 1957, and already before that the engineers had started to study an An-2 which had been borrowed from the CAAC. The static test airframe was completed in October 1957, and the prototype made its maiden flight on 7 December of that year. The type was approved for production by the Military Products Certification Commission of the State Council in March 1958, and series-production started the same month. The aircraft had been known originally as the Fong Shou-2 (Harvester 2) and was later renamed Yunshuji 5 (or short Y5).

The basic Y5 was a transport. An agricultural version was produced in 1958 according to Soviet drawings; 229 aircraft of this variant were built. A passenger version was derived from the basic transport in 1959, with 114 aircraft of this version built. Variants for navigator training, parachuting and aerial photography followed later (Y5C, Y5D, Y5K). In 1989, a certificate was issued for the Y5B agricultural/forestry version. Aircraft of this version are not only converted from older Y5s, but also newly built. A tourist-carrying version, the Y5C, was introduced in 1993. A short-range civil airliner version, the Y5D was in the development stage around the turn of the century. According to "China Aerospace News", a total of more than 300 Y5Bs were reported being needed by the year 2000, with an extra 100 aircraft required for training. CAAC was the operator up to the mid-1980s, before the break-up into the various new companies. We have many below with no sightings, just the registration dates in the 1950/1960s, but with the new operator names only.

The Nanchang factory produced 727 Y5s between 1958 and 1968, and the Shijiazhuang factory another 221 between 1970 and 1986. Production at Shijiazhuang continues at a slow pace, and the 1000th Y5 was rolled out on 25 December 1996. Known exports include about eleven Y5s for Albania, at least seven for North Korea, five for Cambodia, three for Nepal and one for Tanzania. Anyway, the majority was destined for the Chinese domestic market.

### **727 Y5 built by the Nanchang Aircraft Factory (Factory No. 320) between 1957 and 1968**

Up to 18 batches have been recorded with a maximum of 50 aircraft to each batch. It follows, however, that if only 727 aircraft were built at Nanchang, then some of the batches must contain less than fifty aircraft. The c/n gives the batch number followed by the number 320 which stands for the factory number, while last two digits are the number in the batch.

After batch 5, it appears that a simple, four-digit c/n was introduced, using the first two digits as the batch number and the third and fourth digits as the number of the aircraft in the batch. The meaning of the reported c/n 5D-2 for 8447, as shown in the Chinese register, remains suitably inscrutable.

In the late 1980s, the Shijiazhuang factory started with production of the Y5B model. The first Y5B appeared in May 1989. The Yunfu B is an unmanned version of the Y5B which was first noted in 2024.

Construction numbers appear to be in simple batch / number in batch system. Known Y5Bs are as follows, the registration dates were taken from a Chinese internet site and most probably are CoFR dates (renewal or first CoFR).

01 01	8473 B-8473 B-8473	Y5B Y5B Y5B	Jiangmen Avn Corp Jingmen Univers.Al Jingmen General Av	rgd	dec89	current 1999 CoFR issued 28apr99; current jan10 severely damaged 06aug13 when came down in a forest in Danfeng county and broke up, 1 of 2 crew members was killed and the other one was slightly injured; still current on register nov13 current 1999

### Unknown Y5s from all factories

---	no code	Y5	red c/s/black trim	photo			preserved outside the terminal building at Tirana (TIA) since nov12 (N41.41992 E19.71347); was donated by the Albanian Air Force and transferred from Kuçove; l/n may22
---	no reg	FH-98	CASC	f/f	aug18		unmanned version of the Y5B, developed jointly by Feihong Technology (a subsidiary of the China Academy of Aerospace Electronics Technology which is part of the China Aerospace Science and Technology Corporation or CASC) and Fengniao Aeronautics (a subsidiary of the Chinese delivery company SF Express); in white c/s with 'CASC' titles in Chinese and 'SF Express' titles in English and Chinese, a CASC logo on the fin and large 'FH-98' on the rear fuselage; made its first public flight from Baotou (Inner Mongolia) 16oct18
---	001	Y5U	AVIC	f/f	20jul21		unmanned cargo version based on the Y5B; with 5 round windows and one large rectangular window on the right side; in blue/white c/s with unknown Chinese titles and an AVIC logo on the fin; f/n Zhanghe 14jan22
---	B-121T	Y5B(D)	Hebei Jiyuan GA				North China Hebei Jiyuan General Aviation Co. Ltd.; current on register 27jan23
---	B-0AXY	Y5BG	AVIC	SHS	24jul22		in white/dark blue c/s with medium blue trim
---	B-0EJD	Y5BG	AVIC	SHS	09mar24		in all-white c/s with unknown Chinese titles on the underside of the lower wing
---	B-00MZ	Y5	all white, n/t	Szl	25jan18		with small '17' on its tail
---	B-00NV	Y5	all white, n/t	Szl	25jan18		Heilongjiang Kaida General Aviation; current on register 27jan23
---	B-50CM	Y5B(D)	Heilongjiang Kaida	rgd	unknown		Aral Dingjiang Navigation Co.; probably a Hongyan HY100 unmannd version of the Y5B(D); in blue c/s with red nose and white upper wing and tail; current on register 27jan23
---	B-500A	Y5B(D)	Aral Dingjiang N.	rgd	unknown		current on register 27jan23
---	B-500C	Y5B(D)	Liaoning Shida GA	rgd	unknown		reg not current jan09
---	B-3428	Y5		NNG	07apr08		preserved at Menglianggu (N35.570027 E118.191398)
---	B-6538	Y5	Chinese Air Force	ph.	feb09		no titles, logo on tail; seen preserved at Jinan (Shandong) expressway service area (N36.734956 E117.047801); l/n 12dec21
---	B-8075	Y5	China Eastern	photo			reg not current jan09
---	B-8426	Y5	China Avn FI Coll.	Xjn	04nov08		reg not current jan09
---	B-8429	Y5	China Avn FI Coll.	Xjn	04nov08		reg not current jan09
---	B-8444	Y5	Yunnan Airlines	no	reports		wfu
---	B-8446	Y5	Yunnan Airlines	no	reports		wfu
---	B-8521	Y5	not known	ph.	15jan23		registration not visible on photo; in green c/s with two thin blue cheatlines, an unknown blue logo on the fin and light grey undersides; preserved in the Shihezi City Reclamation Museum, seen jan23
---	B-8568	Y5	no titles	ph.	28dec18		preserved in Yanliang Aviation Technologie Museum, seen dec18
---	B-8731	Y5B	not known	no	reports		wfu
---	B-8732	Y5B	not known	no	reports		wfu
---	B-8733	Y5B	not known	no	reports		wfu
---	B-8734	Y5B	Ordos General Avn	ph.	10jul22		in beige c/s with a logo on the fin; sat derelict at Ordos Ejn Horo, seen jul22, titles and registration faded out
---	B-8758	(1)	Y5	ph.	feb09		preserved at Menglianggu (N35.570027 E118.191398); see c/n 1021
---	B-8766	Y5	Hainan Asia-Pac.GA	rgd	13mar07		Hainan Asia Pacific General Aviation; c/n on Chinese register as Y5 c/n 16606, which does not fit with any known sequences of Y5s; f/n Danzhou 12feb09; current on register sep14
---	B-8766	Y5	Jian Air Sports Sc				Jiangxi Province Ji'an Aviation Sports School; current on register 27jan23
---	B-8776	Y5	Shandong School				Shandong Athletic Sports School; w/o 11jun02 on a locust extermination flight from Xinan (Kenli District of Shandong Province) when flew too low, collided with the cables of a hydrological station which spanned the Yellow River, crashed upside-down on an island in the river, caught fire and burnt out, both pilots were killed
---	HY100-003	HY100	Beijing Aerospace	photo			Hongyan HY100 unmannd version of the Y5B(D); prefix in Chinese only; in blue c/s with red nose and white upper wing and tail, with 'Beijing Aerospace Technology Co.' titles in Chinese and English
---	HY100-007	HY100	Beijing Aerospace	photo			Hongyan HY100 unmannd version of the Y5B(D); also carried 'UAS02141032' above the serial; prefix in Chinese only; in blue c/s with red nose and white upper wing and tail, with 'Beijing Aerospace Technology Co.' titles in Chinese and English
---	HY100-008	HY100	Beijing Aerospace	ph.	05may23		at Shihezi; Hongyan HY100 unmannd version of the Y5B(D); also carried 'UAS02597460' above the serial; prefix in Chinese only; operator given as Tianyu Hangtong in a press release; in blue c/s with red nose and white upper wing and tail, with 'Beijing Aerospace Technology Co.' titles in Chinese and English
---	HY100-009	HY100	ZTO Express	photo			Hongyan HY100 unmannd version of the Y5B(D); also carried 'UAS02597461' above the serial; prefix in Chinese only; in blue c/s with red nose and white upper wing and tail
---	not known	HY100	JDL	photo			Hongyan HY100 unmannd version of the Y5B(D); in blue c/s with red nose and white upper wing and tail, with 'JDL' (Jingdong Logistics) titles
---	7102	Y5	Beijing Avn School	no	reports		scrapped after an in-flight accident 02sep93 at Beijing Shahe
---	7451	Y5	Jiangxi Avn Sports	no	reports		retired after an in-flight accident 05feb91 at Ji'an, Jiangxi
---	7571	Y5	Hengyang Avn Sch.	ph.	sep87		white/grey c/s with small black (or dark blue) line below the windows, yellow logo with red star (of the Aviation School?) on rear fuselage; was scrapped after an in flight accident 03aug92 at Luxi, Hunan
---	8001	Y5	Daqing General Avn		06oct88		in Tianjin Aviation Institute of China; is not the same airframe as B-8001
---	8003	Y5	Civ Avn Adm China	no	reports		scrapped after an in flight accident 01jun76
---	8007	Y5	Tianjin Tanguu GA	no	reports		scrapped after an in flight accident 25feb76
---	8008	Y5	Civ Avn Adm China	no	reports		
---	8010	Y5	Civ Avn Adm China	no	reports		canx but date unknown
---	8013	Y5	Civ Avn Adm China	no	reports		scrapped after an in flight accident 22mar85
---	8016	Y5	Civ Avn Adm China	no	reports		damaged beyond repair in crash-landing subsequent to engine failure at Maoming, Guangdong Provinces 19mar83 and later scrapped
---	8019	Y5	Civ Avn Adm China	no	reports		
---	8020	Y5	Civ Avn Adm China	no	reports		
---	8021	Y5	Civ Avn Adm China	no	reports		used in trials early 1980s for testing of cockpit ventilation systems
---	8022	Y5	Civ Avn Adm China	no	reports		
---	8023	Y5	Civ Avn Adm China	Whh	nov91		canx

---	8024	Y5	Civ Avn Adm China	no	reports	canx
---	8025	Y5	Civ Avn Adm China			w/o 22oct67 on an aeromagnetic survey flight flight in Gansu Province when crashed into Mount Houerbao (2,590 metres) in Wen County on the Gansu side close to the Gansu-Sichuan border in cloudy conditions, all 3 crew members and 4 passengers (geophysics specialists) were killed; the wreck was found only jul68 - the topographic map of the area was grossly inaccurate
---	8026	Y5	Civ Avn Adm China	no	reports	scrapped after an in flight accident 13mar71
---	8027	Y5	Civ Avn Adm China	no	reports	canx
---	8028	Y5	Civ Avn Adm China	no	reports	retired after an in flight accident 09jul77
---	8029	Y5	Civ Avn Adm China	no	reports	
---	8030	Y5	Civ Avn Adm China	no	reports	damaged beyond repair at Shanxi Taigu 01sep72, 1 of the 4 crew members was injured while all 12 passengers escaped unhurt
---	8064	Y5	Civ Avn Adm China	no	reports	
---	8065	Y5	Civ Avn Adm China	no	reports	
---	8066	Y5	Civ Avn Adm China	no	reports	
---	8067	Y5	Civ Avn Adm China	no	reports	
---	8068	Y5	Civ Avn Adm China	no	reports	
---	8069	Y5	Civ Avn Adm China	no	reports	
---	8079	Y5	Civ Avn Adm China	no	reports	w/o after flying into mountain in Laishan area, Shandong province, while performing forestry pest control tasks 30sep73
---	8082	Y5	Civ Avn Adm China	no	reports	was involved in an accident 07oct70
---	8087	Y5	China General Avn	no	reports	was involved in an accident 01jul67
---	8089	Y5	Civ Avn Adm China	no	reports	used for spraying disinfectant following the earthquake jul76 in the Tangshan region; still mentioned in official document 1988, based Shanghai
---	8091	Y5	Civ Avn Adm China	no	reports	w/o after flying into mountain in Dangtu County, Anhui Province while performing forestry pest control tasks 30mar75
---	8093	Y5	Civ Avn Adm China	no	reports	based Shanghai, soc 1990 with t/t 6,959 hours 10 minutes
---	8097	Y5	Civ Avn Adm China	no	reports	based Shanghai, soc 1984 with t/t 8,180 hours
---	8098	Y5	Civ Avn Adm China	no	reports	based Shanghai, soc with t/t 8,160 hours
---	8099	Y5	Civ Avn Adm China	no	reports	based Shanghai, with t/t 8,404 hours as of 1985
---	8101	Y5	Civ Avn Adm China	no	reports	based Shanghai, soc 1985 with t/t 7,957 hours 53 minutes
---	8103	Y5	Civ Avn Adm China	no	reports	based Shanghai, soc 1984 with t/t 7,813 hours
---	8104	Y5	Civ Avn Adm China	no	reports	was involved in an accident 26jun81
---	8105	Y5	Civ Avn Adm China	no	reports	
---	8107	Y5	Civ Avn Adm China	no	reports	w/o after flying into mountain in Gao'an County, in Jiangxi province 17jun77 while patrolling a flood area
---	8110	Y5	Civ Avn Adm China	no	reports	w/o after flying into mountain while checking eagles' nests at No 93 state farm, Heilongjiang 20jul84
---	8142	Y5	Civ Avn Adm China	no	reports	
---	8143	Y5	Civ Avn Adm China	no	reports	
---	8144	Y5	Civ Avn Adm China	no	reports	was involved in an in flight accident 22aug85

## Xian Y7

The Xian Aircraft Industry began to develop the Y7 twin-engine turboprop passenger plane based on the An-24 in April 1966. In October 1966, Premier Zhou Enlai and Vice Chairman Ye Jianying approved the design concept of the Y7. Production of the prototype began in October 1969, and the final assembly took place in early December 1970.

Powered by two 2,550 hp WJ-5 turboprop engines (derived from the Ivchenko AI-24A), the maiden flight took place on 25 December 1970. Building the prototype and getting it airborne was a great achievement, however, the setup and tooling of a new production line proved to be even a greater challenge at a time when China was undergoing a cultural revolution. Certification of the Y7 did not take place until 1977, which it failed due to its under-rated engines. A second attempt in 1979 was also unsuccessful. A revised design, powered by two improved 2,900 hp WJ-5A-1 turboprop engines, first flew in 1980, and the aircraft was finally approved for design finalisation 24 July 1982. Three prototypes, one static and one fatigue airframe were built. The aircraft was certified for passenger flight 23 January 1984. The first flight of a production Y7 took place in February 1984, and a pre-production model was publicly displayed in April 1984. The Y7-100 upgraded version with winglets appeared in August 1985, was awarded a certificate of airworthiness by the CAAC on 23 January 1986 and conducted its first passenger flight on 29 April 1986.

Production continued slowly over the next 10+ years, but Chinese airlines soon became addicted to Western equipment, and by 1992 nearly all subsequent aircraft built were for the Chinese military with the exception of a couple exported to Laos. By the turn of the century just about all civil aircraft had been withdrawn from use and stored, with some later finding new homes with the military.

A variant built/converted in large numbers for the military included the HYJ7 (pilot/crew trainer for the H6 bomber) fitted with a stabilised HM-1A bombsight, bomb-aiming radar and a TNL-7880 combined navigation system. The JZY-01 testbed (airborne early warning and control (AEW&C) was also converted from a Y7.

With regards to the Y7 listing below, the following comment should be noted. As most Y7/Y7-100 were originally delivered to the CAAC and new regional airlines were formed at the end of the 1980s, at beginning of the 1990s, many aircraft were still painted as CAAC for a period of time before receiving new colours and titles. Adding to this that the Chinese language is somewhat harder to read/translate, the first reported sightings for some of these aircraft may have still been with CAAC titles rather than the newly formed Airlines.

### **Y7H (Hao = cargo, the Y7H cargo version is similar to the An-26)**

The first flight of the Y7H military cargo transport (originally known as the Y14) and based upon the An-26 airframe was in late 1988. The Y7H-500 civil cargo aircraft first flew 24 March 1992, powered by two 3,050 hp WJ-5E turboprop engines. The domestic civil type certificate was issued 30 December 1993, followed by the series production certificate 15 June 1994. Three prototypes had been built by January 1995. The Chinese military was again the main customer, with only a couple exported to Mauritania and it seems none were actually sold to civil operators. Twelve had been delivered to the Chinese military by 1997, but no further details are known with regards to how many were built - by 2020 it was expected to be at least some 30/40 aircraft.

# AVIC MA60 & MA600 & Y7G

The Modern Ark 60 (Xinzhou 60, or short MA60) is a further development of the Xian Y7. This 56-seater is based on the Y7-200, but is powered by two Pratt & Whitney Canada PW127J turboprops with Hamilton Sundstrand propellers. Apart from that, the MA60 has got a Rockwell-Collins Pro Line 2 avionics suite and a more modern passenger cabin. The winglets of its predecessor were dropped, however.

Initially, the aircraft seems to have been designated Y7-200A. The prototype made its maiden flight in 1993, and the type certificate was issued by the Civil Aviation Administration of China in 1998. The launch customer was Air Chang-an which put two aircraft into operation in 1999. As it seems, the first Modern Ark 60 designated as such flew first on 12 March 2000. The MA60 is now in production for domestic as well as for foreign customers. Six Chinese operators, among them Sichuan Airlines, Zhongyuan Airlines, Wuhan Airlines, Northern Airlines and China Eastern Airlines, have ordered a total of 26 MA60s, while China United Airlines seems to operate the military version Y7G. The first export deal was struck with Air Zimbabwe which bought two aircraft in 2005 and received a third one as a gift from the Chinese government. The largest order so far (for 15 aircraft) has come from the Indonesian airline Merpati. But the MA60 has also found some demand in other African, Asian and Latin American countries.

The latest version is the Modern Ark 600 which features a new Pro Line 21 avionics suite and a main passenger door relocated from the rear of the aircraft to its front. Apart from that, the passenger door incorporates stairs rather than have stairs as a separate attachment. Development of the MA600 started in 2006, the first flight took place on 9 October 2008 and certification was accomplished in spring 2010. As only two MA600s had been ordered by mid-2010, this version will certainly not be a success. It was reported in 2023 that the first 23 MA-60 aircraft were withdrawn, due to airframe issues. The successor of the An-24 clones will become the MA700, a turboprop based on the ATR-72. The official programme start for this 80-seater was on 12 December 2013, but the prototype had not yet flown by 2023 as no suitable engine is available.

The construction number of the MA60 and the Y7G is quite easy to explain: The batch number is followed by the number in the batch. The construction number of the MA600 also starts with the batch number, followed by a 7 for the basic type Y7, then a Roman 1 or 3 (for which we do not yet have an explanation) and the number in the batch.

## More than 130 MA60, Y7G and MA600 built by Xian Aircraft Industrial Corp. (XAC) at Xian-Yanliang from 2000

## ***Shaanxi Y8 & Y9***

Y8T (code name 'High New 4', based on the 'Category I Platform'): Airborne command-post variant. It has a redesigned rear fuselage section with the loading ramp and tail gun turret removed. The aircraft also features a dorsal fairing aft the wing section which might house a SATCOM aerial. Multiple communication antenna arrays can be seen planted along the top and bottom of the fuselage, as well as on the vertical tailfin. The prototype first flew in August 2004 and was tested by the China Flight Test Establishment.

KJ200/KJ200A/KJ200B/KJ200G/KJ200H (code name 'High New 5'): This version is referred to as the 'Balanced Beam' AWACS aircraft with its electronically scanning phased-array radar (JY06) inside a large rectangular fairing carried above the fuselage (similar to the Swedish "ErieEye"). However, the radar in 'Balanced Beam' configuration is unable to scan directly the forward and rear directions of the aircraft and thus lacks the full 360 degree coverage. The prototype (converted from a Y8F-200 by SAC) took off on 8 November 2001. It is powered by improved WJ6C turboprop engines with high-efficiency JL4 six-blade propellers and has got a new tail section without loading ramp. The production version is based on the new 'Category III Platform' which has a redesigned fuselage with a solid nose and a new tail section with the loading ramp removed. More fairings can be seen at the wingtips, tail cone and on top of the tailfin housing ESM aerials. This new variant first flew on 15 January 2005.

Y8Q (code name 'High New 6'): This ASW variant is believed to be based on the 'Category III Platform' with a fully pressurized cabin, WJ6E engines with six-blade propellers and horizontal tails with small vertical stabilisers. It also features a large chin radome housing a surface search radar.

Y8XZ (code name 'High New 7'): This psychological warfare variant was unveiled in April 2008. Based on the 'Category II Platform', the aircraft features large fairings located forward of the main landing gear compartments and two large plate aerials on each side of the rear fuselage. Other features include two blade aerials on both sides of the vertical tailfin, a wire aerial underneath the rear fuselage and a large SATCOM aerial on top of the rear fuselage.

Y8JZ (code name 'High New 8'): ELINT aircraft based on the 'Category III Platform', so powered by four WJ6C turboprop engines with six-blade propellers. This version features a large chin-mounted radome and four large rectangular bar-shaped ESM/ELINT aerials (multi-baseline interferometers) on both sides of the forward and rear fuselage. Additional aerials are installed inside fairings at the wingtips, beneath and on top of the mid-fuselage, on top of the vertical tailfin as well as inside the nose/tail cone.

A further development of the Y8 is the Y9. The designation was used twice - the first Y9 was basically a look-alike of the Il-76 or the C-141 "Starlifter". It was designed by the Xian Aircraft Co. in the late 1960s, but never left the drawing board.

Some thirty years later on, the designation was used again for a modernised version of the ageing Y8. This second Y9 was developed to meet a requirement of the Chinese Air Force for a capable and advanced medium-sized tactical transport comparable to the C-130J "Hercules" in general performance. The resulting design looks like a blend between the An-12 and the C-130J. Compared to the Y8, the new multi-purpose transport aircraft features a more spacious cargo hold (16.2 by 3.2 by 2.35 metres) and a fast loading/unloading system. The Y9 can carry up to 20 tonnes of containerised cargo or 98 fully-equipped soldiers; its payload requirement includes a range of military vehicles, helicopters, cargo containers, pallets and paratroopers.

The Y9 is powered by four improved Zhuzhou WJ6C turboprops with JL4 six-blade propellers made of composite materials which improve its high-temperature and high-altitude performance. The cruise speed of the Y9 is 550 km/h and the range with maximum payload 1,000 km. The aircraft has a crew of four and is equipped with a 'glass cockpit' (with advanced communication, navigation, radar, EGWPS and collision avoidance systems) to ensure safe flight under all weather conditions.

Development began in 2001, probably with assistance from ANTK im. Antonova at Kiev. At that stage the project was still designated Y8-X. The Y9 programme as such was first unveiled by Shaanxi Aircraft Industry at the 11th Beijing Airshow in September 2005, and development started officially in October 2005. The first prototype was expected to fly by the end of 2006, but the programme was delayed by serious organisational shortcomings at the factory and restarted in 2009 only. In the end, the first flight took place probably on 5 November 2010. As with the Y8, many specialized variants have been produced or are in development. Some are/will be direct replacements of earlier Y8 versions. A brief description of the main variants is as follows:

Base variants:

Y9: Tactical transport version, 30+ have already been delivered by the early 2020s.

Y9A: Two aircraft operated by the Army and later Air Force, without aerials as per the base variant Y9.

Y9H: Chinese Navy variant, first seen in June 2020.

Special variants:

Y9YL: Medevac version, first seen in December 2018 and at least two aircraft are known to exist.

Y9XZ (code name 'High New 9'): The second-generation Air Force psychological warfare aircraft in service since mid-2014 and successor to the Y8XZ.

KJ500/KJ500H (code name 'High New 10'): A new generation of an airborne early warning and command platform, successor to the KJ200. The KJ500H is the Chinese Navy version. In service since the end of 2014 and over 30 have been delivered by the early 2020s.

Y9G (code name 'High New 11'): The second-generation Air Force electronic jamming aircraft and the successor to the Y8G, judging from the large number of conformal aerials on the fuselage.

Y9DZ (code name 'High New 12'): Air Force integrated electronic warfare aircraft.

Y9 (code name 'High New 13'): Acting as an air communication centre. This model serves to relay the transmission of radio and satellite communications between the land-based strategic command centre and submerged strategic submarine carriers of ballistic guided missiles.

Y9Q (code name 'High New 14'): Maritime patrol version with a long MAD boom, first seen in November 2020.

ZDK-03 (Y8P): An AWACS aircraft developed for the Pakistan Air Force. Four aircraft were supplied.

The c/n is explained as follows: The first two digits stand for the batch, the third and fourth digit (08 or 18) designate the type variant, relating to the platform category: 08 - original Y8, 18 - new fully pressurized versions of the Y8/Y9, and the last two digits give the number in the batch.

### **3 Y8 prototypes and a static airframe built by the Xian Aircraft Factory (formerly Factory No. 172) at Xian-Yanliang and Hanzhong**

00 08 01	not known	Y8	Xian A/c Factory	mfd	10dec74	the first prototype; construction started in 1972 at Factory No. 172 (Xian-Yanliang) after the design work and drawings were completed feb72; entered final assembly sep74; commenced pre-flight testing 10dec74; f/f 25dec74, duration 26 minutes; flew again 27dec74; in Chinese documents as aircraft '01' of the zero batch; conducted air-drop experiments during the flight-test appraisal programme of the Y8 before the design was approved
---	--	Y8	Shaanxi A/c Fact.			the static test airframe; construction started at Hanzhong dec73 and completed mar76; completed initial trials 25sep76; navigation system and oxygen trials commenced in 1977
00 08 02	no serial	Y8	Shaanxi A/c Fact.	f/f	29dec75	from Hanzhong, duration 25 minutes; the second prototype; assembled at Hanzhong from a kit manufactured at xian-yanliang; black and white photos exist taken 29dec75, in primer c/s with no visible serial on the fuselage; in Chinese documents as aircraft '02' of the zero batch; conducted finalization tests of airborne equipment during the flight-test appraisal programme of the Y8 before the design was approved
	182 (1)	Y8	Chinese Air Force	ph.	1988	in white c/s with grey undersides, blue 'lightning-bolt' cheatline and trim, with red code; converted to Y8C c/n 001802
00 18 02	182 (1)	Y8C	AVIC	f/f	17dec90	the Y8C demonstrator, converted from Y8 c/n 000802; c/n confirmed (the third digit was modified to denote the new version); in white c/s with red/blue cheatlines and trim and an 'AVIC' logo on the fin, with black code; f/n ZUH 05nov96; a photo also exists with a modified tail scheme of red/blue/red stripes
	B-504L	Y8C	AVIC	ph.	2003	c/n not confirmed; the colours are identical to '182', with a modified tail scheme of red/blue/ted stripes; was probably active as such by late 1998, on the basis that B-502L Y7H and 182(2) Y8F-100 c/n unknown were both displayed at ZUH nov98
00 08 03	not known	Y8	Shaanxi A/c Fact.	f/f	jan77	from Hanzhong; the third prototype; assembled at Hanzhong from a kit manufactured at Xian-Yanliang; in Chinese documents as aircraft '03' of the zero batch; conducted finalization tests of the basic performance of the aircraft during the flight-test appraisal programme of the Y8 before the design was approved

### **Y8s & Y9s built by the Shaanxi Aircraft Factory (Factory No. 182, later Shaanxi Aircraft Industry Co.) at Hanzhong since 1980**

02 08 03	31041	Y8	Chinese Air Force	PEK	06apr86	confirmation on the c/n welcome, see next line

## Shanghai Y10

The Y10 was for many years the only large jet airliner designed and built in China. Conceptual studies started in 1970, and development of a medium-range jet transport was formally approved by the State Council and the Military Commission of the Central Committee of the Communist Party on 27 June 1973. The task was taken over by

the Shanghai Aircraft Manufacturing Factory (SAMF) in co-operation with the hanghai Aircraft Design and Research Institute. The aircraft developed by them was basically a reverse-engineered copy of the Boeing 707, the four Pratt & Whitney JT3D-7 turbfans together with the engine pylons were even taken from the Boeing 707-3J6s which China had acquired in the 1970s. So it was no wonder that the Y10 was the first Chinese aircraft designed in accordance with the US Federal Air Regulations. The airliner could seat up to 178 passengers in an all-economy configuration, while the flight-deck was designed for five crew members (among them navigator, flight engineer and radio operator).

The design drawings were ready by June 1975, and the static test airframe was completed in September 1976. It was tested to destruction at the Aircraft Structure Strength Research Institute (ASSRI) on 23 November 1978 when the left wing broke at 100.2 % of the load it was designed for. The sole flying prototype built took off for the first time on 26 September 1980. To test its adaptability to various air routes and airports, it undertook a number of familiarisation flights, visiting Beijing, Hefei, Harbin, Urumqi, Guangzhou, Kunming, Chengdu, Lhasa and other cities. The longest distance covered non-stop was 3,600 km.

Tests continued until at least 1984, and reportedly 40 JT3D-7 engines had already been ordered for initial production aircraft. In 1985, however, it was decided to cancel the Y10 programme. There were several reasons for that. One of them was the limited size of the Chinese market for this category of aircraft (exports were unrealistic). The high cost of the programme, about 300 million US dollars had been spent by then, also played a decisive role. On top of that, there were technical problems like the integrity of the fuel tanks: The Chinese were accustomed to the Soviet style of aircraft building, which uses bladders or tanks for the fuel - unlike the Western style, which uses 'wet wings' (the wing itself is a fuel tank).

As a result of all these factors the decision was taken not to manufacture the Y10, but to join instead with McDonnell Douglas. In April 1985, the Shanghai Aviation Industrial Corp. (SAIC), as the factory was known by then, and McDonnell Douglas signed an agreement providing for the co-production of MD-82s. Between 1987 and 1994, 35 of these twin-jets were assembled from semi-knocked-down kits delivered from the USA, followed by two MD-90s in 2000. So this venture was not too successful either... Thus there were no aircraft built in Shanghai until the ARJ21 emerged.

## **2 Y10 prototypes built by the SAMF at Shanghai-Jiangwan between 1976 and 1980**

00 01	--	Y10	SAMF	mfd	sep76	the static test airframe; underwent static tests with 163 load cases at the ASSRI, tested to destruction 23nov78; about two thirds of the fuselage are preseved with the Northwestern Polytechnical University at Xian (34.245372, 108.907362), seen apr19/mar21
00 02	B-0002	Y10	SAMF, CAAC c/s	f/f	26sep80	the flying prototype; f/n LXA 31jan84; t/t 167 hours and 121 cycles; was stored at Shanghai-Dachang, seen dec02/dec17; preserved in front of the administrative building of COMAC's Shanghai-Pudong plant (31.086961 121.859133) 4 km in straight line from Pudong's runway 33

# Harbin Y11

In November 1974 the Harbin Aircraft Factory was tasked by the Chinese Government to develop a small transport aircraft. The design drawings were completed in June 1975, and construction of the prototype and static test airframe began immediately. Tests on the static test airframe were completed and passed on 19 December 1975, and the first flight of the prototype was made on 30 December 1975. The type was awarded certification in 1977. The Y-11 is a simple all-metal high-wing cargo/transport plane. The centre section is reinforced with struts, to which the main supports of the non-retractable tri-cycle landing gear are attached. It can fly at low altitudes, features short take-off and landing capabilities and can carry a payload of 1,250 kg. It is powered by two Chinese HS6D piston engines.

The c/n is divided into three pairs of two digits: The first pair indicates the type, the second pair is the batch and the third pair gives the number in the batch. However, the type (11) does not appear in the published official Chinese register in more recent years, only the last four digits or in some cases five digits commencing with an extra '0'. At least four aircraft have been physically checked and have five digits commencing with the extra '0' actually painted on the aircraft.

## Harbin Y12

Looking like a cross between the de Havilland Canada DHC-6 "Twin Otter" and the Pilatus/Britten-Norman "Turbo Islander", this utility transport was designed specifically for short field operations.

The Y12-I was the initial version (first flight on 14 July 1982) with PT6A-10 and subsequently PT6A-11 engines, but only three prototypes were built.

The Y12-II followed with more powerful PT6A-27 engines (first flight on 16 August 1984) and able to carry up to 17 passengers or the equivalent in freight. It could be adapted for such roles as ambulance work, crop spraying and survey work. For many years it was the sole Chinese designed aircraft to have found a market outside of Asia, with deliveries already having been made to Africa, South America, the Middle East, Central Asia, Far East and the Pacific.

Y-12 (III) was a planned version to be fitted with WJ-9 turboprop enginss. Evolved to Y12C because of IV's success when the WJ-9 development was completed.

Y-12 (IV) is an improved version with swept-back wingtips, modifications to control surface actuation, main gear and brakes, redesigned seating for 18 to 19 passengers, starboard side rear baggage door, maximum payload and maximum T-O weight increased. Further changes include Rockwell Collins or Honeywell com/nav for both VFR and IFR, plus optional colour weather radar, GPS, Omega navigation, wing and tail de-icin and oxygen system. Domestic certification was received on 3 July 1994 and FAR Part 23 approval on 26 March 1995; Indonesian certification on 16 November 2000.

Y-12C a (IV) version with WJ-9 turboprop engines, now used by the Chinese Air Force for aerial survey.

Y-12E with 18 passenger seats. PT6A-135A engines of equal horsepower but increased torque driving four-bladed propellers.

Y-12F currently under development with wider fuselage, retractable landing gear and more powerful engines.

Y-12G dedicated cargo aircraft with side cargo door and windowless cabin accommodating three LD3 standard containers.

In 2001 the production of the new/upgraded Y12-IV and Y12E started. These differed from the earlier models having swept-back wingtips, modifications to the control surfaces, main gear and brakes with a redesigned interior for seating of 18/19.

The construction number seems reasonably clear, with only a sequence number to be shown. An exception being the extra aircraft '012B/01213' built extra to the sequence. The plate is found on the left side under, or just in front of, the horizontal tail-plane.

The later Y12-IV & Y12E series built since around 2001 have a three digit sequence number. Both versions start at 001 and therefore duplicate construction numbers exist, so the version is of importance to determine the sequence it belongs to.

### Known production is as follows, c/ns straight forward in sequence

## **Y12F series built since around 2010**

The Y12F has a wider fuselage, a retractable landing gear, more powerful engines, seats 19 and does not resemble the original Y12 at all.

# AVIC Y20

The Y20 is a four-engine military transport aircraft which looks like a mix of an Il-76, an An-70 and a C-17. The first versions Y20 and Y20A were powered by four Russian Solovoyov D-30KP-2 turbofan engines, while the Y20B is powered by Chinese WS20 turbofans. The basic design of the Y20 was developed by ANTK im. Antonova of Kiev in 2004, on the basis of a contract with AVIC-II which had been signed on 20 December 2003. The 603 Institute, the XAC and the SAC took part in the design process later as well. Construction of the rear fuselage of the first prototype started on 20 August 2009 (by the SAC), and the first flight took place on 26 January 2013. The first two aircraft entered service with the Chinese Air Force on 6 July 2016. The YY20 is the tanker version.

## **Y20 built by Xian Aircraft Industrial Corp. (XAC) at Xian-Yanliang from 2012**

At Kaifeng 20x4x (00-49) is based, ie the Y20s and previously the Y-8Cs of 13th Division/37th Regiment At Wuhan the II-76/78 of 13th Division/38th Brigade are based (20x4x (50-99) So onë might expect the YY-20s also there

## COMAC ARJ21 & C909 "Xiang Feng"

The 'Advanced Regional Jet for the 21st Century' (ARJ21) is a product of the Commercial Aircraft Corporation of China, or short COMAC. The programme to build the first Chinese jetliner since the failed Y10 project was officially launched on 7 November 2000 with an initial funding of 700 million US dollars and was approved by the Chinese government in June 2002. Responsible for research and development was the First Aircraft Institute of AVIC I which was created through the merger of the Xian and Shanghai Aircraft Design and Research Institutes. A foreign co-operation partner in the ARJ21 programme was ANTK im. Antonova from Kiev which designed the super-critical wing.

Development of the ARJ21 represented the next phase in China's rapid expansion of its aviation market. Some 100 new airports were scheduled for construction within China until 2020 to meet the increased demand. As a result, feeder traffic could grow by 12 % annually over the next 20 years, creating a need for large numbers of modern commuter aircraft. While AVIC II builds 50-seat ERJ145 jetliners in Harbin in co-operation with Brazil's Embraer, AVIC I has chosen a different approach. Looking conspicuously similar to a Douglas DC-9 and sporting the same 3+2 interior seating arrangement, the ARJ21 owes much of its design heritage and appearance to a partnership formed in 1992 between McDonnell Douglas and the China National Aero-Technology Import and Export Corporation (CATIC) to co-produce MD-90s in China for the domestic market. As in the case of the MD-90, the Shanghai Aircraft Manufacturing Facility (SAMF) has taken responsibility for final assembly (using its MD-90 tooling). It also builds the horizontal stabilizer. The Xian Aircraft Company manufactures the plane's wings and all its fuselage sections. And the Chengdu Aircraft Industrial Corporation builds the nose section, while the Shenyang Aircraft Corporation supplies the empennage.

The "Xiang Feng" (Flying Phoenix) was designed to meet the demanding conditions of China's diverse environment, specifically the hot temperature and high altitude conditions experienced on many routes in Western China. It is powered by two General Electric CF34-10A turbofan engines which may eventually be produced under licence by the Liming Aero Engine Company in Shenyang. Another supplier from the US is Rockwell Collins who delivers its Pro Line 21 avionics suite.

Metal cutting for the first static test frame began simultaneously at the Chengdu, Shanghai and Xian plants on 20 December 2003, and the first flight of an ARJ21 took place on 28 November 2008. The start of series-production was delayed by several years, and certification by the Civil Aviation Administration of China was achieved only on 30 December 2014. Certification by the US FAA was planned as well, but COMAC resigned from this intention in September 2015.

Two basic models were planned, the 85-seat ARJ21-700 and the 105-seat ARJ21-900. Under study were also the ARJ21-700F freighter and the ARJ21-700B business jet. The former would have been able to transport five LD7 containers, while the latter would have featured additional fuel tanks and an executive interior for up to 20 travellers. COMAC had hoped that the domestic market would absorb 350 passenger-carrying ARJ21s, along with 90 freighter and quick-conversion variants. In addition to that, 200 aircraft were to be sold abroad (a total of 278 ARJ21s were on order by November 2014). However, the programme met with substantial difficulties at the initial stage and did not make much progress for several years. A substantial annual production rate was only reached in 2019.

The type was rebranded as the C909 in October 2024 to create a family of designations similar to those adopted by Boeing and Airbus. The change will bring the C909 in line with its 'big brother' C919 and the wide-body C929 currently under development. The wing design was also slightly changed at the same time.

The construction numbers were initially sequence numbers, starting with 101. In mid-2023, the system changed, with the first digit 2 being replaced by 101. The first such construction number was 10127 (it would have been 227 in the old system).

### ARJ21 prototypes and production aircraft built by the SAMF at Shanghai-Dachang from 2007

01	--	ARJ21-700	primer	mfd	28sep07	static test airframe; metal cutting started 20dec03; static and ground resonance tests with the Aircraft Strength Research Institute of China completed 20oct09; 100 % load limit static test completed 31jul09; the wing of either this or c/n 02 or 03 cracked during a stress test at Xian in mid-2010

## COMAC C919

The C919 is a twin-engine short to medium-range jet airliner with a capacity of 168 passengers developed by the Commercial Aircraft Corporation of China (or short COMAC). The designation C919 can be deciphered as follows: C stands for COMAC as well as for China (in addition, it suggests a continuity of ABC with A like Airbus, B like Boeing and C like COMAC), the 9 stand for eternity (in Chinese yongheng) and the 19 stands for the maximum planned passenger capacity (190). Development started

around 2008 and assembly of the first prototype on 9 December 2011, while the first flight took place on 5 May 2017. Final assembly is accomplished by the Shanghai Aircraft Manufacturing Facility, while the centre wing box, outer wing box, wing panels, flaps and ailerons are built by the Xian Aircraft Industrial Corporation, the centre fuselage sections by the Hongdu Aviation Industry Group and the fin by the Shenyang Aircraft Corporation. The aircraft is powered by CFM International LEAP-1C turbofan engines which shall be replaced by Chinese CJ1000A engines mid-terms. The C919 received its type certification from the Civil Aviation Administration of China (CAAC) on 29 September 2022, and the first delivery took place on 9 December 2022. As of autumn 2022, 815 orders (among them 349 'firm' ones) had been placed by 28 Chinese airlines and leasing companies. The main competitors of the C919 will be the Boeing 737MAX and the A320N.

**CAIGA "Leadair" AG300**

The "Leadair" AG300 is an all-composite business aircraft which was developed by the China Aviation Industry General Aircraft Company (CAIGA). It is powered by an unidentified turbo-prop, is equipped with five seats, can attain speeds of up to 600 km/h and has got a range of up to 2,500 km. Its maiden flight took place on 5 July 2014, and certification according to CCAR 23 and FAR23 rules is expected for 2015. Three Chinese companies have already signed purchase orders for the AG300.

**AG300 built by CAIGA at Zhuhai from 2014**

**AVIC KJ600**

The KJ600 is a carrier-borne AEW&C aircraft similar to the US Navy's E-2 "Hawkeye" and was designed by the Xian Aircraft Industrial Corporation in co-operation with the 603 Institute. The aircraft is powered by two FWJ6C turbo-prop engines with six-blade propellers, weighs 25-30 tonnes and has a large KLC-7 AESA radar in a radome on top of the fuselage, folding wings and a four-rudder empennage. It needs a catapult for take-off from an aircraft carrier and hence can be used on the Type 002 only, not on the current Type 001/001A. A full-scale mock-up was first sighted on board of the mock-up aircraft carrier near Wuhan in January 2017. The first flight took place on 29 August 2020.

**Harbin SH5**

When the Beriev Be-6 fleet of the People's Liberation Army Navy (PLAN) became obsolete, the Chinese government approved the development of a successor in December 1968. The task was undertaken by the Chinese Seaplane Design Institute (also known as the 605th Research Institute) in co-operation with the Harbin Aircraft Manufacturing Corporation (HAMC); chief designer was Wang Hongzhang. After consideration of various preliminary designs, the detailed technical project of a four-turboprop flying boat that could be used for anti-submarine warfare, maritime patrol, SAR and cargo transport roles was completed in February 1970. The aircraft received the official designation Shuishang Hongzhaji 5, or short Shuihong 5 (Maritime Bomber 5). For the design of the SH5, the wings and the four-turboprop scheme of the Shaanxi Y8 were combined with the empennage of the Beriev Be-12 and a new fuselage clearly owing much to that of the Japanese Shin Meiwa PS-1. The SH5, which is powered by four Dongan (DEMCO) WJ5A turboprops, is a pure seaplane, though it does have built-in beaching gear roughly similar to that of the PS-1.

Drawings for production were released from March to October 1970, but the programme was seriously delayed by the turmoil of the Chinese 'Cultural Revolution'. A static test airframe was ready in October 1971, but the static test programme at the Aircraft Structure Strength Research Institute was not completed until August 1974. In the meantime, a flying prototype had been rolled out in December 1973, beginning water trials in May 1975 and eventually performing its first flight on 3 April 1976.

The slow pace of the programme continued, and flight tests were completed only by the end of 1985. A single production batch of four aircraft was built by the HAMC until November 1984. They were delivered to the People's Liberation Army Naval Air Force in September 1986, equipping the 3rd independent air regiment based near Qingdao (N36.266832 E120.38168). This unit is under the command of the PLAN North Sea Fleet and has got the code 93 (the first and fourth digit of the board number). Some SH5s are reportedly fitted with electronic surveillance and reconnaissance equipment for special missions. One of the aircraft was evaluated as a 'water bomber' for fighting forest fires, it can carry eight tonnes of water in the cabin. If configured as a cargolifter, the SH5 can carry ten tonnes of cargo. Although no successor available for this beautiful flying boat it was phased out in 2018.

### **3 SH5 prototypes and 4 production aircraft built by HAMC at Harbin between 1971 and 1984**

## **AVIC AG600 "Kunlong"**

The AG600 (Jiaolong 600) is a large amphibian powered by four Zhuzhou WJ6 turboprop engines. Development started in 2009 and construction of the prototype in 2014. The first flight took place on 24 December 2017. An improved version with a modified nose and cockpit section, the AG600M, flew first on 29 August 2022. The aircraft can be used for fire-fighting (it can collect 12 tonnes of water in 20 seconds) and SAR, but also for transport (carrying 50 passengers over up to 5,000 km). The latter capability could give the type strategic value in the South China Sea, which has been subject to various territorial disputes. According to Chinese sources, there were already 17 orders for the type by early 2015.

### **AG600 built by the Zhuhai Yanzhou Aircraft Corporation (ZYAC) at Zhuhai from 2016**

---	'B-002A'	AG600	AVIC	ph.	nov20	a full-scale mock-up; in white c/s with dark blue trim and grey belly, titles in Chinese only; displayed in the Jingmen Aviator Town (N30.984289 E112.087750), seen nov20
1001	no reg	AG600	AVIC	r/o	23jul16	the first prototype; production started in 2014, the mid-fuselage section was completed 29dec14 and the nose section was completed 17mar15; in primer
	B-002A	AG600	AVIC	ZUH	30oct16	in white c/s with dark blue trim and grey belly, titles in Chinese only; f/f 24dec17; f/f from water 20oct18; 172 flights with 308 hours by may20; performed its first landing and take-off on the sea near Qingdao 26jul20
1002 ?	---	AG600	AVIC			the first static test airframe
9008	---	AG600	AVIC	mfd	2021	the second static test airframe; the assemblies were delivered to the Aviation Industry Tongfei South China Company 03dec21
9009	---	AG600	AVIC			the dynamic test airframe; in primer; the central fuselage section was delivered 14jan24; trials completed 18apr24
1003	B-0DCC	AG600M	AVIC	r/o	25dec21	the prototype of the improved version, with a modified nose and cockpit section; construction started 28jan21; rolled out still in primer without registration; in white c/s with red and yellow trim, titles in Chinese only; first flight 31may22; f/n ZUH 04jun22, still in primer; l/n as such ZUH 05jun22; first flight from water 29aug22; painted in white/red c/s with yellow trim, titles in Chinese only; f/n as such Jingmen 27sep22; l/n ZUH 08nov22
1004 ?	---	AG600M	AVIC			probably the static test airframe of the improved version
1005	B-0HEH	AG600M	AVIC	f/f	10sep22	the second prototype of this version; initially still in primer, titles in Chinese only; repainted in white c/s with red and yellow trim, titles in Chinese only; f/n as such jun23; l/n oct23
1006	B-0AWT	AG600M	AVIC	f/f	09dec22	the third prototype of this version; initially still in primer, titles in Chinese only; l/n as such ZUH 24dec22; repainted in white c/s with red and yellow trim, titles in Chinese only; f/n as such Pucheng-Nefei 16may23
1007 ?	B-0FAS	AG600M	AVIC	f/f	25feb23	the fourth prototype of this version; initially still in primer, titles in Chinese only; repainted in white c/s with red and yellow trim, titles in Chinese only; f/n as such nov23

## **AVIC HO300**

The HO300 (Seagull 300) is an amphibian with either four or six seats. It is somewhat similar to the Beriev Be-103 of which China has bought some, but is powered by one engine only. The prototype flew first on 10 November 2010.

### **HO300 built by Shijiazhuang Aircraft Industry at Shijiazhuang from 2010**

---	no reg	HO300	AVIC	r/o	04aug10	in all-white c/s without any markings
---	B-1190L	HO300	AVIC	f/f	10nov10	in white c/s with blue and red trim, titles in Chinese only
---	B-007L	HO300	AVIC	ZUH	16nov12	in white c/s with blue and red trim, titles in Chinese only; l/n ZUH 19nov12
---	B-00AT	HO300	AVIC	ph.	sep18	at Shijiazhuang-Luancheng; in white c/s with blue and red trim, titles in Chinese only
---	B-00QL	HO300	AVIC	ph	27may16	at Anyang; in white c/s with blue and red trim, titles in Chinese only; l/n Beijing-Shifosi 27aug16

## **Harbin H5**

China had planned to license build the Il-28, but this fell through when relations with the Soviet Union deteriorated in the early 1960s. As a result, China began developing a reverse engineered copy in 1963 and was manufactured by Harbin as the H-5. There were differences to the Soviet Il-28s and featured a slightly different wing and tail, bomb sight, radios and other equipment. The tail turret was the main external identification feature of the H-5. The H-5 bombers didn't carry tip tanks and the recce version HZ-5 carried additional fuel tanks only on pylons under their wings.

Manufacturing of the jigs and tooling started in 1964. The first two airframes, the flying prototype and a static test airframe were completed in 1966 and the H-5 prototype flew on 25 September 1966. Full scale production at Harbin commenced in April 1967. The VK-1 engines for the bomber were manufactured by the Shenyang Engine Factory as the WP-5A. About 450 (other sources suggest over 319) were reported to have been built with production continuing until 1984. Versions included, the H-5 standard three-seat tactical bomber (export version B-5), the HJ-5 trainer (export version BT-5), the HZ-5 tactical reconnaissance (export version B-5R) and the HD-5 a modified electronic warfare version.

The H-5s served with the PLAFAF and PLANAF through the 1990s, but most were withdrawn from service before the beginning of the 21st century, with the exception of a small number retained in secondary roles. The JH-7 fighter-bomber eventually replaced the type completely.

## Nanchang CJ5 & CJ6

The very first airplane made in China was the CJ5, a tail dragger, primary trainer. It was a licensed production of the Soviet Yak-18, with a 160 hp M11 radial engine. The first CJ5 prototype was built in 1954 by the Nanchang Aircraft Factory and was originally designated the CJ54 (Hongzhuan 501). The first flight was made on 3 July 1954 by Mr. Xianglu Duan and Mr. Jiaping Diao. The type was used in Chinese Air Force service during 1954 to 1978 with a total production of 379 aircraft. Production stopped in 1958.

The c/n starts with the batch number, followed by the factory code '320' and the number in the batch.

### **379 CJ5 built by the Nanchang Aircraft Factory (Factory No. 320) at Nanchang from 1954 to 1958**

---	not known	CJ5	Chinese Air Force	f/f	03jul54	the first prototype

## **2,800+ CJ6 built by the Nanchang Aircraft Factory (Factory No. 320) at Nanchang since 1962**

The Nanchang CJ6 started from a Chinese AF requirement for a tricycle primary trainer in mid 1950s. In September 1956, China's first aircraft design team was set up at Shenyang, headed by Mr. Shunshou Xu with general design layout being assigned to Jiahua Lin and Beushi Cheng. Their first task was to design a Chinese primary trainer and by December of 1957 they had named it the CJ1. (Primary Trainer No.1) by May 1958 designers had a full-scale wooden mock-up fitted with a Czech Dorris-B engine. It was at this time the project was moved to the Nanchang factory.

By July 1958 the aircraft had been renamed the "Hongzhuan 502", and had received a Russian engine, the 160 hp Shvetsov M-11FR. It was used on the prototype because of the late delivery of the Dorris-B engine. First flight took place on 27th of August 1958, flown by test pilots Mr. Maofan Lu & Mr.Yinxì He.

It had been just 72 days from detail design to first flight with the prototype, which was manufactured in 30 days.(All of the first airframe's major sub-assemblies were riveted together in 14 days, the final assembly being completed in 7 days by 3 work shifts). A full-scale, static airframe was tested to destruction and drop tests of the landing gear performed. Test flights however, could not be finished because of inadequate power from the M-11FR engine and the fixed-pitch prop. At the same time, the Russian Yak-18A was in production, with a more powerful engine, the 260 hp Ivchenko AI-14. The Chinese AF required quick delivery and in March 1960 the Chinese aviation industry authority decided to emulate production of the Yak18A and the Hongzhuan 502 test flight programme was further delayed.

In August 1960 new decisions were made. The Russian AI-14 engine replaced the M-11 for the Hongzhuan 502, and test flights resumed November 18th, 1960. The spinning test was done by test pilot Mr. Zhaolian Huang. Also, in August of 1960, the Zhuzhou Engine Factory started copy-production of the Russian AI-14 engine. The production prototype made its first flight on October 15th, 1961, the flight-test program lasting eventually for 612 flight hours and including over 1,800 take-offs and landings. The Sino-Russian brother-relationship broke up 1961, and they also renamed the aircraft "Primary Trainer CJ61".In January 1962, the government approved full-scale production at the Nanchang factory. On June 4th 1962, Zhuzhou certified & named the copy-built engine the HS-6, producing it fully in 1963. by 1964 the primary trainer was officially named the CJ6 with the 260 hp Zhuzhou HS-6 engine and J2-G1 propeller, and progressing, by 1966, to the CJ6A version fitted with a 285 hp Zhuzhou HS-6A engine and a J9G1 propeller. Also in 1966 a CJ6B with two 7.62 mm machine guns was produced, of which ten aircraft were manufactured There were two factories prior to 1979: Nanchang Hongdu (Factory No. 320) & Nanchang Changjiang (Factory No. 512). Nanchang Changjiang closed by the end of the 1970s.

In 1985 the 'Haiyan' (Petrel) was produced for agricultural purposes. In 2002, the CJ6G was reportedly in production with a 400 hp HS-6K engine and a JL-2 three-bladed propeller. Total production numbers are reported to be 2,400 to date and still in limited production.

The CJ6A production was stopped in 2007. After some years the L-7 was developed as a successor for the Yak-18 derivative. The aircraft did make it to the flight test phase but the project was soon after that abandoned. Starting 2015 the CJ6A production has been restarted with batch 67 (or even 66) with 24 aircraft for Bangladesh in batch 70 and 71 and about 48 aircraft for each batch, it is estimated that about 200 aircraft have been built on the re-started production line by 2020, which has a total count of over 2765 airframes produced by then. The last few years CJ6As identified are therefore brand-new aircraft.

The Chinese Air Force keeps a Nanchang CJ6 fleet of 1,000 aircraft. It is reported that some 250 Aircraft have been exported to 10 foreign Air Forces: 15 aircraft for Albania, 59 for Bangladesh, 50+ for North Korea, 12 to Zambia, unknown numbers to Tanzania and Cambodia and 10 to Sri Lanka). Finally, the CJ6 attained its civil aviation type certificate on 28 February 2019, more than 60 years after it entered military service in China.

The production was restarted in 2015 and since new PT6's were delivered again to at least Bangladesh, Tanzania and Sri Lanka.

The construction number starts with the batch number, followed by the factory code (320 for Nanchang-Hongdu and 512 for Nanchang-Changjiang) and the number in the batch.

Note: The CJ5 and CJ6 have an identical range of construction numbers, so care needs to be taken to identify the correct type.

## Harbin Z6

This first indigenous Chinese helicopter was developed as a replacement for the Harbin Z5, the Chinese copy of the Mi-4. The new utility helicopter, which was to have more lift and a better 'hot and high' performance than its predecessor, received the designation Zhishengji 6 (Helicopter 6), or short Z6. Development work started at the Harbin Aircraft Factory in 1966, but was transferred to the newly founded Helicopter Design and Research Institute in 1968. In the same year, the project obtained official authorisation by the People's Liberation Army and the Chinese government.

The Z5 was taken as the basis for the new design, with the HS7 piston engine being replaced by a Zhuzhou (ZARI) WZ5 turboshaft, a modified copy of the Soviet AI-24A. The engine was moved from the nose to the top of the cabin while the fuselage was extended and received a new cockpit section. Rear hatch, tailboom and fin remained unchanged, though. The resulting design looked quite similar to the Mil V-8 prototype. The Z6 was designed mainly to carry airborne troops, but could also be adapted to other mission requirements. It was able to carry 12 soldiers or 1,200 kg of cargo with a cruise speed of 168 km/h over a distance of 650 km.

The static test airframe was completed in 1967, and the first prototype made its first 'real' flight (after three simulations of sudden engine shut-down and autorotation) on 15 December 1969. The Chinese aviation industry underwent a major restructuring in 1970, in the process of which development and production of the Z6 were transferred to the provinces of Jiangsu and Jiangxi. At first it had been planned that the newly founded Changhe Aircraft Factory at Jingdezhen should take over production, but soon afterwards this decision was revised and the Hongzhuang Machinery Factory (today known as the Changzhou Aircraft Factory) at Changzhou became responsible for final assembly.

Although the State Council and the Military Commission of the Central Committee of the Communist Party issued a type certificate to the Z6 on 28 February 1977, the programme was abandoned in February 1979 after a total production of 15 helicopters by three factories. There were several reasons for this, among them the choice of a powerplant which did not prove itself, unsatisfying performance and poor reliability. Apart from that, China had started to buy far superior Mil Mi-8 helicopters from the Soviet Union in 1972, making the Z6 no longer necessary.

#### **4 Z6 prototypes built by the Harbin Aircraft Factory (Factory No. 122) at Harbin between 1967 and 1969**

6 001	--	Z6	Harbin A/c Fact.	mfd	1967	the static test airframe; the landing gear broke feb69 before having reached the planned stress threshold and the fuselage showed structural weaknesses as well; transferred to the Nanjing Aviation Institute for use as a ground instructional airframe jun74
6 002	not known	Z6	Harbin A/c Fact.	f/f	15dec69	the flying prototype; probably without code; factory trials were completed 25jan70 (34 flights with t/t 20 hours 26 minutes); ferried to Beijing mar70 for a demonstration flight for the Air Force leadership; w/o 07aug72 on a positioning flight from Harbin to Jiangsu together with c/n 6003 when a shaft in the engine gear-box jammed and the helicopter crashed at the Liu House Commune near Gongzhuling (Jilin Province), all 6 occupants (pilot: Fu Guifa) were killed
6 003	no code	Z6	Harbin A/c Fact.	photo		in white/light grey c/s, no markings whatsoever; flew to Nanjing aug70 for high-temperature test flights at Dazhang; damaged probably in autumn 1970 on return from 'hot and high' trials to Harbin when an oil pipe broke (due to a design fault) so that the helicopter had to make a forced landing near Tangshan, but the rotor blades collided with a pole of a power-line and the helicopter crash-landed, all 10 occupants were injured; repaired; flew from Harbin to Jiangsu together with c/n 6002 07aug72
	6003	Z6	Chinese Air Force	photo		still owned by the Harbin Aircraft Factory; in white/light grey c/s with military roundels and red code; transferred to the Nanjing Aviation Institute for use as a ground instructional airframe jun74

---	26	Z6	Chinese Air Force	ph.	oct90	preserved in the China Aviation Museum at Shahezhn AFB (at times without serial), seen oct90/jan19, unmarked since 2014

## **Harbin Z7**

A further development of the Z6 was the Z7, a heavy helicopter with a payload capacity of 3,500 kg. It was to carry a reinforced infantry platoon over a distance of up to 350 km. The new helicopter was to be powered by a twin-pack of modified WZ5A turboshaft engines providing higher reliability than the single WZ5 of its predecessor. The six-blade rotor, the rotor hub and the gear box of the Z7 were new developments, while the remaining parts were to be as common as possible with those of the Z6. The Chinese Aeronautical Establishment (CAE) decided in 1969 that the design task shall be undertaken by the Helicopter Design and Research Institute in co-operation with factories and institutes subordinated to the CAE. Development started in 1970, but was adversely affected by the 'Cultural Revolution'. By May 1975, 97 % of the parts and assemblies had been manufactured, and two airframes were almost completed. However, the full-size static test was carried out only in 1979. By that time, it became obvious that the Chinese economy was not able to support parallel development of two heavy helicopters. As production status of the Changhe Z8, a re-engineered copy of the French SA-321Ja, could be achieved with less risk and cost, it was decided on 28 June 1979 to abandon the Z7 programme.

#### **2 Z7 prototypes built by the Harbin Aircraft Factory (Factory No. 122) at Harbin in the 1970s**

7 001 ?	--	Z7	Harbin A/c Fact.			the static test airframe; full-size static test conducted in 1979
7 002 ?	--	Z7	Harbin A/c Fact.			the planned flying prototype; never flew

## **Changhe Z8**

China bought 13 Aérospatiale SA321Ja "Super Frelon" ASW/SAR helicopters in 1977/78. At least one of these helicopters was disassembled for survey and reverse-engineering. Development of the Chinese copy of the SA321Ja began in 1977 at the Changhe Aircraft Factory (now Changhe Aircraft Industry Group or short CHAIG) at Jingdezhen. However, the Z8 development encountered enormous technical difficulties, and the project was suspended in 1979 due to financial reasons. Changhe resumed the Z8 programme with its own funding in mid-1984, and the first prototype successfully flew on 11 December 1985. The Z8 entered service with the Chinese Navy in 1989 for trials and evaluation, but the helicopter was not certified for design finalisation until 1994. Only a small number of the original version have been built. Development of an army variant designated Z8A began in the mid-1990s, and it was certified for design finalisation in February 1999. After two examples were delivered to the Chinese Army Aviation Corps for operational test and evaluation in 2001, Changhe began the delivery of the first production batch in November 2002. Development of the new utility variant Z8F with three Pratt & Whitney Canada PT6A-67B turbo-shaft engines instead of the Changzhou WZ6 copies of the French Turboméca 3C III was announced by CHAIG during the 2002 Zhuhai Air Show, and the first helicopter of this version made its maiden flight in August 2004. A ship-borne variant designated Z8J entered service with the Chinese Navy late in the first decade of the new millenium As the original variant Z8 did not possess the ability to take-off and land on surface vessels, the Z8J features some modifications in its landing gears to allow shipborne operations. There are two variants currently in service: Z8J for ship-borne transport and re-supply roles and Z8JH for the medical evacuation role. The Z8K/KA is a dedicated search and rescue (SAR) helicopter fielded by the Chinese Air Force in 2007. It appears to be based on the Z8F design, featuring the PT6A-67B engines and redesigned air inlets. The Z8KH is an SAR version for the Hong Kong garrison which flew first in 2009. The 'K' in the designation of this version stands for Air Force and the 'H' for Hong Kong. The Z8S is a naval SAR version which flew first on 25 December 2004. The Z8WJS is a fire-fighter version for the China Armed Police Forest Force (Wu Jing Senlin). The abbreviation of the user is reflected in the designation. The latest development is an AEW version with a retractable radar antenna attached to the rear loading-ramp door which can be lowered vertically and provide 360° coverage. This version is thought to be developed to support the ship-borne J15 fighter on board of the Chinese aircraft carrier "Liaoning". There is also a civil version, the Z8F-100 (commercial designation AC313). It has got an MTOW of 13.8 tonnes, a range of 900 km and can carry 27 passengers.

Some 50 examples had been fielded by the Chinese Armed Forces by 2009, among them 9 Z8, 9 Z8A, 6 Z8J, 4 Z8JH, 12 Z8K, 8 Z8KA and 2 Z8S. Production continued at slow pace, and some 130 helicopters were known by 2023. All helicopters with codes in the 94x6 range are not Z8, but French-built SA321Ja. Apparently the 95x6 range has been used twice, as helicopters with such codes were reported to be French-built as well, but now Z8JH carry codes in this range. The construction number is often found painted on top of the tail fin. The helicopter with the probably fake serial 5496 in the Taizhou Hai Chi (Japan Sea; Navy) Museum (at N32.427102 E119.972034) is also an SA321Ja.

#### **Z8 built by Changhe Aircraft Industry Group (CHAIG) at Jingdezhen from 1985**

# Harbin Z9, H410/H425 "Haitun" & Avicopter AC312

Versions: Z9G - night version, Z9W - anti-armour attack helicopter, H410 - civil version, H425 - civil version with more powerful engines, more modern avionics, long radar nose and a wider cabin with a reduced number of windows.

The H410 made its maiden flight at Harbin in September 2001 and obtained its Chinese certification in June 2002.

Oddly enough, some French-built SA365N helicopters were also seen with Z9 construction numbers painted on, for example c/n 6020 as c/n Z9-05-6020 and c/n 6027 as c/n Z9-05-6027 (seen as such in the factory at Harbin on 6 October 1988). The construction number is often found painted on top of the tail fin.

B-730 to B-749, B-7101 to B-7107, B-7111, 03-6149 and 9616 (2) are French-built SA365N helicopters, while B-7005, B-7006, B-7008, B-7119, B-7120, B-7129, B-7130, B-7132, B-7133, B-7135, B-7141, B-HRU to B-HRY and 31003 are French-built EC155B helicopters.

## Z9 built by HAMC (former Factory No. 122) at Harbin since 1981

# Changhe Z10

This tandem-seat attack helicopter was incepted by the Russian Kamov design bureau under a contract with the Chinese government. Dubbed Project 941, the concept was initially designed in 1995 and later developed by China into the Z10.

Z10-05	Z10-05	Z10A	CHAIC/CFTE	ph.	04mar14	no serial visible; dbr 04mar14 when came down hard in a field in Gushi town (Weinan, Shaanxi province), probably after colliding with a high-voltage power-line, both pilots were injured

## Changhe Z11 & Avicopter AC301

The Z11 is a copy of the Aérospatiale AS350B. Development began in 1991, and the first flight took place in December 1994. Small batch production began in 1997. The Army Aviation Corps Training Regiment has received a total of 37 Z11s in the Z11J (military) model for the training role from September 1998. The Z11W armed helicopter made its first flight on 27 December 2004.

On 14 October 2011, CATIC and the Argentinian government signed a contract envisaging licence production of the Z11 by Fábrica Argentina de Aviones "Brigadier San Martín" at Córdoba. The helicopters will initially be assembled from CKD kits delivered from China, but eventually production shall be completely localised. There are plans to equip the Argentinian Z11s with Honeywell LTS101-700D-2 engines, but at least the first helicopter was powered by a standard WZ8D engine.

### **Z11 built by Changhe Aircraft Industry Group (CHAIG) at Jingdezhen since 1997**

## Avicopter AC311

The AC311 is a modernised version of the AC301 (Z11) which is powered by a Honeywell LTS101-700D-2 turboshaft engine. The first flight took place on 8 November 2010, and certification was achieved in June 2012.

## Avicopter AC352 (Z15)

The AC352 is a joint development by Eurocopter and Avicopter. The French version is designated EC175/H175 and made its maiden flight on 4 December 2009, while the Chinese version took to the air only on 20 December 2016. As opposed to its French counterpart, the AC352 is powered by a Turbomeca/AVIC Engine WZ16 turboshaft engine (designated "Ardiden" 3C in France). Seven have been ordered by the Hong Kong Government Flying Services in September 2015 (three will be delivered in 2017 and four in 2018), but they might be produced by Airbus Helicopters as H175s instead of the Harbin Aviation Industry Group.

### AC352 built by the Harbin Aviation Industry Group (HAIG) at Harbin

## Changhe Z18

The Z18 is a modernised version of the Z8. It is based on the new AC313/Z8F hull design that, among others, gave away the boat-like keel/bottom fuselage. A more powerful WZ6 engine version has been installed, and the cockpit has been modernised as well. Two versions of the type are based on the two aircraft carriers, the Z18F ASW helicopter and the Z18A AEW helicopter. The Z18F carries a flat search radome under the nose and sonobuoy launch tubes in the rear fuselage. It has also got hardpoints to carry four torpedoes. The Z18A is fitted with a revised rear fuselage where a flat antenna seems to be located. This is an improved version of the big radar which was attached to the rear fuselage of the Z8F prototype which was known as Z8YJ at the time. The version for the Army is the Z18 (not yet known) which is intended to replace the early Z8A helicopters.

## Harbin Z19

The Z19 is a dedicated attack helicopter developed on the basis of the Z9WA. It is lighter and cheaper than the Z10 combat helicopter. The first flight took place in May 2010.

### Z19 built by HAMC (former Factory No. 122) at Harbin from around 2011

## Harbin Z20

The Harbin Z20 is basically a look-alike of the Sikorsky "Black Hawk" (China had bought 24 S-70C-2s for its Army Aviation in 1984). It was designed by the Changhe/Jingdezhen Aircraft Industry Group (later Changhe Aircraft Industries Corporation) in co-operation with the 602nd Institute (later China Helicopter Research and Development Institute) and the Harbin Aircraft Industry Group (HAIG). Development of the Z20 started just before the turn of the century, but was held up some years to free valuable resources to the Z10 attack helicopter project. The type was first noted by the public when a nicely packed airframe was seen road-running in August 2013. The Z20 prototypes probably use the same WZ9 engines, gear box and rotor as the Z10, whereas the production helicopters are expected to be powered by WZ11 or WZ16 engines. The first flight took place from Harbin on 23 December 2013.

## Harbin Z21

The Harbin Z21 is a 10-tonnes-class attack helicopter which seems to be based on the Z20 airframe, with elements that can also be found on the AH-64 (aft fuselage) and the Mil Mi-28 (nose). It was first noted in March 2024. The designation Z21 needs formal confirmation.
